n37 - Antigravity + Spline for 3D Websites

Build stunning 3D websites with AI — no coding required — using Antigravity and Spline (also works for Claude Code or Codex!)

🔧 *For support, please check this **Where to get help** page in the main community*

Resources

- Google Antigravity: https://antigravity.google/
- Spline Design: https://spline.design/
- Spline Skill: see attached zip at the bottom (you can give this to your agent)

  For the AI practice template shown in the video (with the 3d robot), you can find it **here in the main community!**

Design Inspiration Sites

One of the best ways to create websites is find a design inspiration you like, and provide them to your agent as reference. Here are some curated lists!

• godly.website — Curated collection of modern web designs

• land-book.com — Landing page gallery sorted by style

• awwwards.com — Award-winning websites judged by designers

• 21st.dev — Spline/3D components ready to use

• lapa.ninja — Landing page inspiration with filters

• landingfolio.com — SaaS and startup landing pages

• saaslandingpage.com — Specifically SaaS website examples

• onepagelove.com — Single-page website showcase

• siteinspire.com— Minimal, clean design inspiration

- minimal.gallery — Minimalist website collection

- darkmodedesign.com— Dark-themed websites only

- httpster.net — Curated web design inspiration

- spline.design/community — Free 3D assets and scenes

How to Add a Custom Domain to Netlify

A simple step-by-step guide to connect your own domain to a Netlify project.

Step 1: Buy your domain

Go to Namecheap, Cloudflare, or GoDaddy → search your .com → purchase it (~$10-15/year)

Step 2: Add domain to Netlify

Netlify dashboard → Your site → Domain settings → Add custom domain → Enter your domain (e.g. mysite.com (http://mysite.com/))

Step 3: Update DNS

Netlify gives you nameservers (dns1.p01.nsone.net (http://dns1.p01.nsone.net/), etc.) → Go to your domain registrar → Find DNS/Nameserver settings → Replace with Netlify's nameservers → Wait 10-30 mins

✅ **Done — your site is now live at yoursite.com (http://yoursite.com/)!**
